

## ROOF INSULATION THAT WILL KEEP YOUR BELONGING'S DRY!

Shanette manufacture a range of Sheds and Garages, using the Shanette designed and developed built-up roof insulation system to protect the building contents from condensation and water droplets.

The Shanette designed and developed insulation system is used throughout the roof structure of these unique sectional buildings. The main benefit this system is to prevent condensation and water droplets forming on the roof purlins and cladding, with the Shanette system there will be no condensation dripping on your valuables.

This system consists of High density insulation combined with breathable roof membrane's. Using a strong, bright coloured membrane on the interior surfaces of this range, provides a very attractive interior finish.

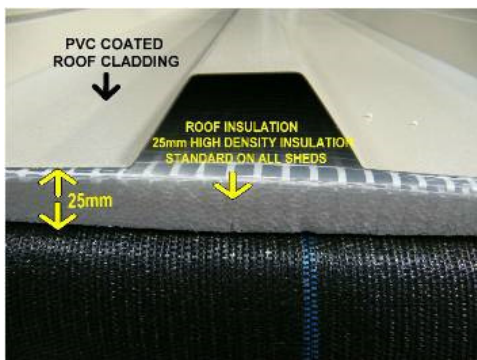

## ROOF INSULATION SYSTEM COMPROMISES

- A 25mm thick, High density, insulation board.
- Special breathable membrane lining on the interior of the insulation panel.
- An attractive interior finish

This product used in the Shanette range will give you a very competitively priced Insulated Shed or Garage that won't weep or condensate, giving you a safe and dry storage space.

## REACTION OF FIRE

- Interior breathable membrane Flammability resistance to EN 11925-2
- Insulation reaction to fire: Class F year:03

**PLEASE NOTE:** Other shed companies only use anti-con sheeting on their roofs. The underside of the roof still remains wet and therefore cannot be classed as an insulation, during the winter month's water droplet's forming on un-insulated roof's can be a serious problem.

**SHANETTE SHEDS DOES NOT USE "ANTI-CON" ROOF CLADDING.**
