

Shanette

**Shanette offer the best
pre-fabricated
Steel Buildings**

Established 1983

Introduction

Shanette is the longest established manufacturer of section-built storage buildings in Ireland and it has offered a tough and durable product since its foundation in 1983.

Shanette produces two ranges of buildings (**Classic and Supreme**) to meet its customers needs. With Shanette, your building will be custom-designed to suit your specific requirements.

Why choose a Shanette Steel Building?

- We have over 25 years experience in sectional shed design and manufacture.
- A Shanette building is unique in style, design, specification and construction.
- All Shanette buildings (walls and roofs) are sectionally pre-fabricated in its own quality controlled factory.
- The building's frames are made of heavy duty, structural grade galvanised steel sections.
- Our framework and flashings are seam-folded on their edges to maximise strength and safety.
- Shanette delivers and installs all buildings. This ensures all buildings are built to high standards.
- When installing large buildings, we use our own truck-mounted cranes, so you have no extra machine hire costs.
- With Shanette sectional sheds, you are ensured of:
 - Value for money
 - Quality service
 - Premium materials
 - An attractive finish
 - Fast construction time on your site
 - No necessity for any on-site fabrication work, so you have a clean, tidy site, when your new building has been completed.
- They are cheaper to construct than a block building and will be erected in one day on your pre-installed concrete floor slab.

The Classic Range

The unique feature of the Classic Range is its built-up, roof insulation system, which has been designed and developed by Shanette and comprises:

- A 25mm thick, high density, polystyrene insulation panel
- Special breathable membrane lining on both sides of the insulation panel.
- An attractive interior finish
- The Shanette roofing system **prevents** condensation.

Shanette is the only steel building manufacturer in Ireland, which uses this 25mm roof insulation system on all Classic sheds and garages.

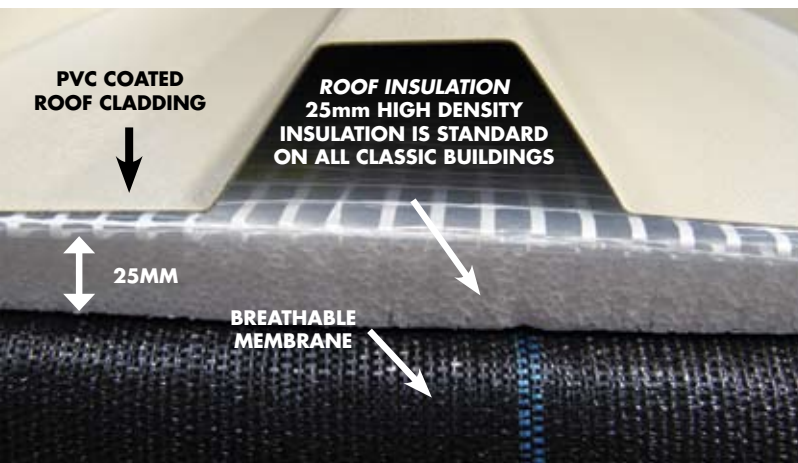

Warning

- Other manufacturers offer a "non-drip" coating on the interior of their buildings' roofs.
- However, this coating does not prevent condensation; it only absorbs the water.
- The underside of the sheet remains wet and therefore it cannot be classed as an insulation.
- Without proper ventilation, the risk occurs of droplet formation.
- Clearlights are not recommended in a roof using non-drip sheeting.

FEATURES OF THE SHANETTE CLASSIC RANGE

Fully-galvanised frame	✓
Premium materials	✓
All fasteners are colour coded	✓
Pre-fabricated wall & roof panels for easy site access	✓
Special 25mm roof insulation system	✓
No condensation dripping on your valuables	✓
Heavy duty roof clearlights that won't discolour	✓
Walls ventilated with louvered vents for air movement	✓
Industrial-style roller door	✓
Aluminium gutters standard on garages	✓
All units delivered and installed nationwide	✓
Clean & tidy construction	✓
Easily dismantled and moved to a new site	✓
10 year structural guarantee	✓
20 year exterior finish guarantee	✓
We can customize units to suit you	✓

Shanette Classic Roof Insulation & Single Skin, Vented Wall Panel

Shanette's Classic Roof Insulation System

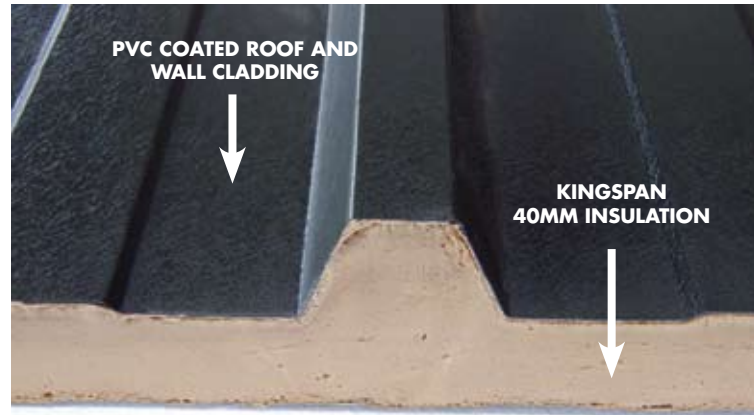

The Supreme Range

- Shanette's Supreme Range of buildings feature fully-insulated roofs and walls.
- They are constructed using a very high quality insulated composite panel manufactured in Ireland by Kingspan.
- Incorporating a PVC coated outer sheet for long-lasting climate protection, the interior side of both the walls and the roof is finished in a **white, smooth, easy-clean metal surface**.
- These 40mm thick panels are used in both the roof and walls. (60mm and 80mm optional).
- They are insurer approved and are manufactured using fire-safe PIR insulation.
- These fully-insulated buildings are easily heated and retain heat at the required temperature.
- The advantage of a fully-insulated building is particularly evident in the winter-time.

Depending upon your specific end-use requirements, a Shanette building may be finished-out internally with plastered walls and drop ceilings.

Whether you choose a PVC coated, stone, brick or wood effect external finish for your Shanette building, it will visually fit well with your existing buildings.

Shanette's Supreme Roof Insulation System

FEATURES OF THE SHANETTE SUPREME RANGE

- Fully-galvanised frame ✓
- Premium materials ✓
- All exterior fasteners are colour coded ✓
- Pre-fabricated wall & roof panels ✓
